importers & distributors  
of cabinet fittings

**Router Bit 3.2**

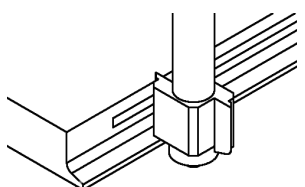

For the Installation of Enko profile handles, No109a, b & c, No127, No128, and our aluminium edging.

**Router Bit 131/1**

For the Installation of Enko profile handles, No131 a, b & c.

**Router Bit 131/2**

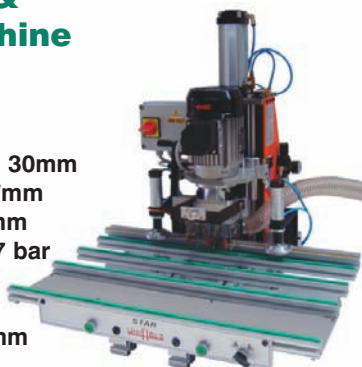

For the Installation of Enko profile handles, No131 a, b & c.

**Hinge Boring & Inserting Machine**

**Technical details:**

- Motor power:** 0,75Kw
- Max. panel thickness:** 30mm
- Unit displacement:** 57mm
- Max bit diameter:** 40mm
- Working pressure:** 6-7 bar
- Working time:** 7 sec (approx per cycle)
- Suction casing:** ø 50mm
- Overall dimensions:** 80 x 75 x 81cm H
- Net weight:** 58kg
- Three-phase power supply:** 380-440V/50Hz
- Made in Italy**

This machine is among the most safe machines, it is of high quality and well priced. It is a really compact machine which can fully meet the requirements of the most exacting user. Performances: User-friendliness, reliability, safety.

**Standard equipment:**

- Bearing surface 800 x 550mm
- 3-spindle drilling unit ø 10 tool-holder complete with suction casing
- Possible change of drilling feed, by adjusting the pneumatic braking
- 2 clamps to fasten the piece
- 1 hinge template
- Board cleaning device
- 2 bits ø 10
- 1 bit ø 35
- Position indicator
- 1m flexible pipe to connect the casing with the suction unit
- Tools
- Attestation of conformity

Data, weights and measures are approx. And not binding. We reserve the right to make modifications without notice.

**Air operated. Available for purchase, lease or loan.**

**Freephone 0508 ENKOPHONE | Freefax 0508 ENKOFAX**

**NOVORYT®**

SWISS MADE

**Novoryt Melting Putty**

**NOVORYT Melting Putty is a middle hard repairing kit for heavily used surfaces such as floors and furniture.**

**With NOVORYT Melting Putty you can repair the following:**

- Parquet • Laminate • Cork • Resin • PVC • Corean

NOVORYT Melting Putties are delivered as bars and are available in many standard colours. The Putties can be mixed together to obtain a perfect colour matching.

Usage step by step:

1. Heat the melting putty up with an appropriate tool (NOVORYT Gas or Battery Melter). The ideal processing temperature is 120°C. Too much heat destroys the ingredients and the material bubbles!
2. Fill in the melted putty to the damaged part and let the material cool down.
- 3 As soon as the material is cold you can remove the surplus with a tool such as a chisel.
4. As and when required you can protect the repair work with NOVORYT Lacquer Fixation which even gives the surface its shine as before.

**NOVORYT Melting Putties are made for heavily used surfaces.**
